

Controlling The Real World With Computers

:: Control And Embedded Systems ::

The Arduino Route Table Of Contents

Updated December 7, 2015

[01 - How to Read a Schematic And Basic Electronics](#)

[02 – Test Answers for How to Read a Schematic & Basic Electronics](#)

[03 - Programming Part 1 - The C Programming Language - Flowcharting, Commenting, Arduino Sketches, Object Naming, Setup\(\) and loop\(\), for Loops, switch\(\), Blink, Chase, etc.](#)

[04 - Data lines, bits, nibbles, bytes, words, binary and HEX](#)

[05 - Answers For Data lines, bits, nibbles, bytes, words, binary and HEX Test](#)

[06 - Boolean Logic - AND, OR, XOR, NAND, NOR, NXOR](#)

[07 - Answers for Boolean Logic Test](#)

[08 - Programming Part 2 - More interesting Chase, using more LEDs, delay\(\), using arrays, introduction to fading rather than blinking LEDs with Pulse Width Modulation](#)

[09 - Programming Part 3 - Fading programs, fading 5 LEDs up and down in sequence using Pulse Width Modulation](#)

[10 - Programming Experiment 1 - The RGB LED, 3-in-one, Red, Green and Blue in a single package, using the ThreeSweep program to fade the three colors up and down in brightness, producing many colors, using analogRead\(..\) to get values from a control to change the brightness of the three LEDs in the RGB LED](#)

[11 - Programming Experiment 2 - Basics of the DC electric motor, and using Pulse Width Modulation to control motors, using a MOSFET to provide the power to run a motor](#)

[12 - Build the Listening Car Board - Learning how to solder, and building a device that permits PWM control of high-power devices that can be used in future experiments.](#)
